

Azure Foundation with CAF: 1-week Assessment

About Data Foundation

Data-Driven will perform an Azure infrastructure and configuration audit and review using the Microsoft Cloud Adoption Framework (CAF) and aligned with the Landing Zone deployment for Azure, then providing recommendations to improve your infrastructure setup and accelerate your company's Azure adoption.

See what customers are saying:

"The Data-Driven assessment helped us understand our Azure environment, so we could manage our service provider better and make a realistic plan on how we can improve the performance of our application."

Jay Holland, NGR, Business & Digital Growth Manager

Our Offer?

Business Workshops

We focus on understanding your key business drivers, requirements and your current Azure infrastructure.

Hands-on Azure Infrastructure Audit

Data-Driven will perform a hands-on review of your current Azure Infrastructure, following best practices and configuration principles for your business requirements.

Recommendations with priority and Complexity

We will provide detailed documentation of the current state and recommendations to ensure better performance, security and scalability.

Why our Azure CAF Assessment?

Optimal Application Performance

Find the right balance between speed, scalability, cost, and performance for your business applications.

Cost-Optimized Deployment

Take control over your Azure usage and improve your application's performance and deployment processes.

Fit for purpose Azure Service Configuration

Your platform is built on best practices and ensures the most secure and reliable platform possible.

How does it work?

Workshop

- ✓ Workshop with relevant stakeholders to understand the current application deployment in Azure and the existing Azure infrastructure.

Audit & Review

- ✓ Assess the following key cloud configuration principles:
 - Performance efficiency
 - Operational excellence
 - Security
 - Reliability
 - Cost optimization review

Documentation

- ✓ Detailed documentation of the current Azure Infrastructure configurations.
- ✓ Recommendation with level of business priority and complexity.

Final Presentation

- ✓ Presentation of the current findings
- ✓ Presentation of the recommendations and explanation of the priority levels and complexity.
- ✓ Identify next phases

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
